Connecting In Case of Crisis MCP to Claude

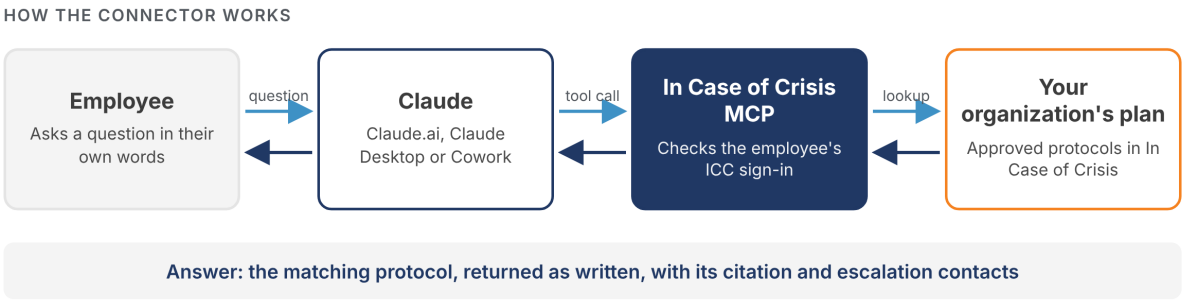

Connector setup guide for Claude.ai, Claude Desktop and Cowork

RockDove Solutions · v4.0 · 2026-10-27 · Public

1. Purpose

This guide connects the In Case of Crisis MCP connector to Claude so employees can ask Claude what their organization's emergency plan says and get the approved protocol back as written, with its citation. Setup takes about 3 minutes per person and needs no installation or code. On Team and Enterprise plans an Owner adds the connector once before anyone else can connect.

In a life-threatening emergency, call 9-1-1 first. The connector returns your organization's approved guidance. It does not contact emergency services, send notifications or file incident reports; use the In Case of Crisis app for those actions.

2. What the connector does

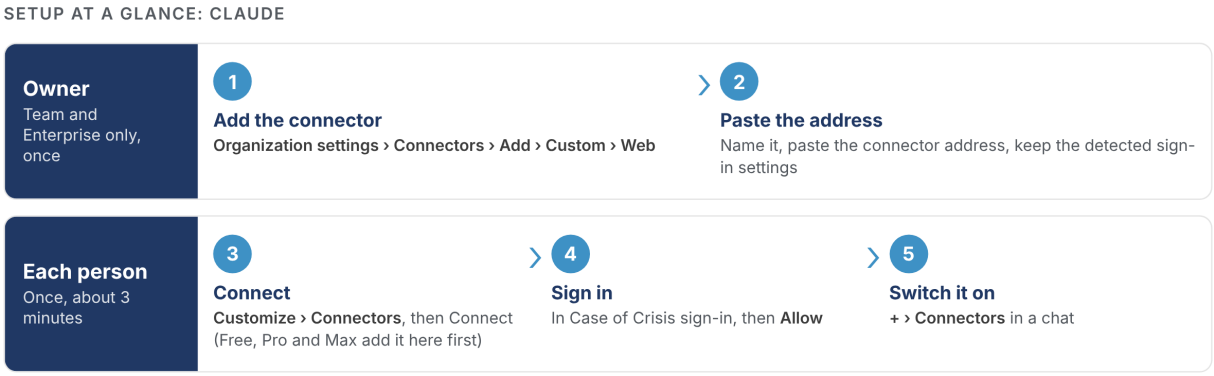

The In Case of Crisis MCP connector is read-only. It gives Claude two lookups against your organization's approved plan in In Case of Crisis: (1) browse or search the protocol catalog, and (2) open one protocol and return its text, escalation contacts and citation. Each employee signs in with their own In Case of Crisis account, so Claude only sees the protocols published for that person's organization. Claude never sees the employee's In Case of Crisis password.

3. Before you start

- ☐ Your organization has an active In Case of Crisis subscription, and RockDove Solutions has enabled the MCP connector for it. Your Customer Success Manager (CSM) can confirm both.
- ☐ You have your In Case of Crisis sign-in (the same email and password, or Login with Microsoft, that you already use).
- ☐ You use Claude.ai in a browser, Claude Desktop, or Cowork on any plan. The Free plan allows one custom connector.
- ☐ Team or Enterprise plan: an Owner has already added the connector (Part 1), or you are that Owner.
- ☐ You have the connector address:

4. Part 1: Owner setup (Team and Enterprise only)

Only Owners and Primary Owners can add connectors on a Team plan. On Enterprise, a custom role with permission to manage connectors can also add them. Free, Pro and Max users skip to Part 2, Option A.

1. **Open Organization settings › Connectors** and select **Add**.
2. **Hover** over **Custom**, then select **Web**.
3. **Enter** the name `In Case of Crisis MCP`, paste the connector address, and select **Continue**.
4. **Keep** the authentication settings Claude detects and select **Continue**. Leave **Request headers** empty. In Case of Crisis uses individual sign-in, and a fixed credential here would be shared by every member who uses the connector.
5. **Select Add**. The connector now appears for members with a **Custom** label.

5. Part 2: Connect your account (everyone)

Option A: Free, Pro and Max. You add the connector yourself.

1. **Open Customize › Connectors** in Claude.ai or Claude Desktop.
2. **Select + Add**, then **Add custom connector**.
3. **Enter** the name `In Case of Crisis MCP`, paste the connector address, and select **Continue**.
4. **Keep** the detected authentication settings, choose **Sign in now**, and select **Add**.
5. **Sign in** to In Case of Crisis in the window that opens, then select **Allow**.

Option B: Team and Enterprise members. Your Owner has already added the connector.

1. **Open Customize › Connectors** and find **In Case of Crisis MCP** (labelled **Custom**).
2. **Select Connect**.

3. **Sign in** to In Case of Crisis in the window that opens, then select **Allow**.

Then, in any chat:

1. **Select** the **+** button at the lower left of the message box, then **Connectors**.
2. **Switch on In Case of Crisis MCP**. The toggle applies per conversation.

You can disconnect at any time from **Customize › Connectors**.

6. Verification

Start a new chat with the connector switched on and ask one of these:

- *Using In Case of Crisis MCP, show me our approved crisis protocols.*
- *What does our plan say to do during a flash flood?*
- *Someone smells gas in the break room. What does our plan say?*

The first time, Claude may ask permission to use the tool; select **Allow**. Claude can show the protocol catalog as an interactive list. A working answer leads with your plan, keeps the steps in the plan's order and ends with a citation.

WHAT A GOOD ANSWER LOOKS LIKE

A flash flood warning was just issued for our area. What do we do?

Your emergency plan says:

1. **Move** to the highest floor of the building. Do not go to a basement or an underground parking garage. Do not go to an attic or fully enclosed top space unless there is roof access.
2. **Relocate** critical records, servers, and equipment above expected flood level and charge mobile phones and devices.
3. **Do not walk, swim or drive** through flood water. Six inches of moving water can knock an adult down and twelve inches can move a car. Turn around, don't drown.
4. If your vehicle is caught in rising water, **get out** and move to higher ground if you can do so safely. Stay off bridges over fast-moving water.
5. **Wait** for the all-clear from your Manager or emergency services before leaving.

Flooding/Flash Flood: If a Flash Flood Warning Is Issued (ICC Premium Protocols 9.15.2026)

CHECK Steps in the plan's own order, nothing added, and a citation back to the protocol.

7. Rollout notes

- **Connect before you need it.** Each person signs in once. Have employees complete Part 2 during onboarding, not during an incident.
- **Name the connector in your question.** Claude decides when to use a connector. Starting with *Using In Case of Crisis MCP* makes that decision for it.
- **Mobile.** Add and connect from Claude.ai or Claude Desktop. Confirm the connector is available in the Claude mobile app before relying on it there.

- **Missing protocol.** The catalog contains your organization's published protocols. If one you expect is missing, contact your CSM.

8. Troubleshooting

Symptom	Action
No **Add custom connector** option	Ask your Owner (Team or Enterprise) or update Claude Desktop.
Free plan will not add it	Free allows one custom connector. Remove an unused one first.
Sign-in window does not open	Select **Connect** on **Customize › Connectors** again.
Organization login not shown	Choose **Login with Microsoft** if your organization uses Microsoft Entra for In Case of Crisis.
Claude answers without your plan	Switch the connector on under **+ › Connectors** and name it in the question.
A protocol you expect is missing	Contact your CSM; it may not be published to your organization yet.
Signed in but access stops	Contact support. Do not delete and recreate the connector.

Support

Email support@incaseofcrisis.com and mention "In Case of Crisis MCP connector setup — Claude." Your CSM can confirm whether the connector is enabled for your organization.

Version history

Version	Date	Changes
4.0	October 27, 2026	Rewritten for the current Claude connector settings. Added Owner setup, member connect, Cowork support, verification prompts, rollout notes, troubleshooting and connector overview.
3.0	September 15, 2026	One-page setup guide.
